

Raw Vintage Tremolo Springs

"I have known the little secret of putting 5 springs on the strat tremolo for a long time in order to increase the sustain of the guitar. However to me there was always a trade off with that scenario. I would achieve better sustain however it will come with harsh upper mids that would bother me sound wise. Also the tension would increase so tremolo would become useless. If I would back off with the 2 pivot screws to adjust the proper tension of the springs, then the tension would be right but the upper mid harshness would still be present and the whole process would be kind of a trade off and not

quite right.

I was pleasantly surprised when I have put Raw Vintage tremolo springs in it for few key reasons: One, I didn't know what to expect and was kind of sceptical at first. Second the lower tension of the springs allowed me to put 5 springs instead of standard 3 that I would have in my guitars and those 5 springs would have aprox. the same tension as the original 3. Now here is what came as a total shocking surprise, the tone itself was waaaay fuller, richer and there was a lot more sustain gained on my guitar. Fundamental notes were simply fuller, deeper, richer and there wasn't any unusual upper midrange harshness present at all. This is simply the most amazing improvement tonal wise on a strat that one can do and benefit for ridiculous marginal amount of money. But money on aside, even if it costed few hundred dollars it would be worth spending considering the dramatic improvement in tone!

This Raw Vintage springs make a world of difference! I am a believer!"
